Environmental Oceanography	
Semester & Year:	Fall 2012
Course ID and Section Number:	OCEAN-12-E2069
Number of Credits/Units:	3
Day/Time:	TTH 01:15PM - 02:40PM
Location:	
Instructor's Name:	PS 111
Contact Information:	Office location and hours:
	Phone: 707.476.4210 x 4823
	Email:danny-oshea@redwoods.edu
Course Description (catalog des	cription as described in course outline):
A study of the fundamental	principles of oceanography and the resources
available from the sea. The b	basic concepts of physical, chemical, geologic, and
biological oceanography will	be explored in discussions on marine mineral
• • • • •	ng resources of the sea, marine pollution, and ocean
nanagement.	
Student Learning Outcomes (as on the second se	•
Student Learning Outcomes (as o Make reasonable interpretation Apply the scientific method to th Identify the underlying concepts of different areas. Describe in writing the processes	s of scientific data. ne critical evaluation of data and concepts. and physical and chemical processes of oceanography in a variety onships between physical and chemical environmental factors and racteristic of an area.
 Student Learning Outcomes (as of 1. Make reasonable interpretation) 2. Apply the scientific method to the scientific method to the scientific method to the scientify the underlying concepts of different areas. 4. Recognize and discuss the relation the organisms and populations chance. 5. Discuss the relationships between the principal source materials for each source ma	s of scientific data. The critical evaluation of data and concepts. The and physical and chemical processes of oceanography in a variety conships between physical and chemical environmental factors and racteristic of an area. The oceanic processes and local and global climate and weather. Is involved in the formation of sediments in the ocean and identify ach of the basic types of marine sediments.
Student Learning Outcomes (as of Make reasonable interpretations Apply the scientific method to th I. Apply the scientific method to th I. Identify the underlying concepts of different areas. I. Recognize and discuss the relation the organisms and populations char Discuss the relationships between Discuss the r	s of scientific data. The critical evaluation of data and concepts. The and physical and chemical processes of oceanography in a variety conships between physical and chemical environmental factors and racteristic of an area. The oceanic processes and local and global climate and weather. Is involved in the formation of sediments in the ocean and identify ach of the basic types of marine sediments. The rapid growth of the human population plays in the exploitation the in transmitting the theories of science.
Student Learning Outcomes (as of L. Make reasonable interpretations 2. Apply the scientific method to th 3. Identify the underlying concepts of different areas. 4. Recognize and discuss the relation the organisms and populations char 5. Discuss the relationships between 6. Describe in writing the processes the principal source materials for each 7. Recognize the central role that the principal sources. 8. Evaluate the popular media's rol 5. Special accommodations: College	s of scientific data. The critical evaluation of data and concepts. The and physical and chemical processes of oceanography in a variety conships between physical and chemical environmental factors and racteristic of an area. The oceanic processes and local and global climate and weather. Is involved in the formation of sediments in the ocean and identify ach of the basic types of marine sediments. The rapid growth of the human population plays in the exploitation The in transmitting the theories of science. The of the Redwoods complies with the Americans with
 Student Learning Outcomes (as of L. Make reasonable interpretations). Make reasonable interpretations? Apply the scientific method to the scientific method to the scientify the underlying concepts of different areas. Recognize and discuss the relations of different areas. Recognize and discuss the relations of sciences of sciences and populations characterizes and populations of the principal source materials for early and the processes of marine resources. Evaluate the popular media's role sciences and the process of the popular media's role sciences and the processes. 	s of scientific data. The critical evaluation of data and concepts. The and physical and chemical processes of oceanography in a variety conships between physical and chemical environmental factors and racteristic of an area. The oceanic processes and local and global climate and weather. Is involved in the formation of sediments in the ocean and identify ach of the basic types of marine sediments. The rapid growth of the human population plays in the exploitation the rapid growth of the human population sin the exploitation the rapid growth of the human population plays in the exploitation the rapid growth of the numan population plays in the exploitation the rapid growth of the numan population plays in the exploitation the number of the Redwoods complies with the Americans with able accommodations for qualified students with disabilities.
 Apply the scientific method to the scientific method to the scientific method to the scientific method to the scientify the underlying concepts of different areas. Recognize and discuss the relation he organisms and populations characterizes and populations characterizes the relationships between the principal source materials for each marine resources. Evaluate the popular media's role for a scientific method to the scientific source materials for each marine resources. Evaluate the popular media's role scientific source materials for each marine resources. 	s of scientific data. The critical evaluation of data and concepts. The and physical and chemical processes of oceanography in a variety conships between physical and chemical environmental factors and racteristic of an area. The oceanic processes and local and global climate and weather. Is involved in the formation of sediments in the ocean and identify ach of the basic types of marine sediments. The rapid growth of the human population plays in the exploitation le in transmitting the theories of science. The of the Redwoods complies with the Americans with able accommodations for qualified students with disabilities. mmodation request at least one week before the first test so
 Student Learning Outcomes (as of L. Make reasonable interpretation) Apply the scientific method to the scientific method to the scientific method to the scientify the underlying concepts of different areas. Recognize and discuss the relations of different areas. Recognize and discuss the relations of sciences and populations characterizes and populations characterizes the relationships between the principal source materials for earnine resources. Evaluate the popular media's role of marine resources. 	s of scientific data. The critical evaluation of data and concepts. The and physical and chemical processes of oceanography in a variety conships between physical and chemical environmental factors and racteristic of an area. The oceanic processes and local and global climate and weather. Is involved in the formation of sediments in the ocean and identify ach of the basic types of marine sediments. The rapid growth of the human population plays in the exploitation the rapid growth of the human population sin the exploitation the rapid growth of the human population sin the ocean with the rapid growth of the numan population plays in the exploitation the in transmitting the theories of science. The of the Redwoods complies with the Americans with able accommodations for qualified students with disabilities.

Programs and Services. Students may make requests for alternative media by contacting DSPS.

Academic Misconduct: Cheating, plagiarism, collusion, abuse of resource materials, computer misuse, fabrication or falsification, multiple submissions, complicity in academic misconduct, and/ or bearing false witness will not be tolerated. Violations will be dealt with according to the procedures and sanctions proscribed by the College of the Redwoods. Students caught plagiarizing or cheating on exams will receive an "F" in the course.

The student code of conduct is available on the College of the Redwoods website at: <u>http://www.redwoods.edu/District/Board/New/Chapter5/Ap5500.pdf</u>

College of the Redwoods is committed to equal opportunity in employment, admission to the college, and in the conduct of all of its programs and activities.
